

WrapAroundPacker

The KHS Kisters WrapAroundPacker packs bottles, jars or cans in wrap-around cartons or trays as required. Continuous and fully automatic operation ensures a high output, low operator attendance and high efficiency. The rugged, modular design minimizes the production downtime required for servicing and repairs.

KHS Kisters WrapAroundPackers are designed for speeds of up to 100 packs per minute. All machines are designed to handle a large range of formats.

WrapAroundPacker for more efficiency

The KHS Kisters WrapAroundPackers leave nothing to be desired. Continuous operation mode, gentle product conveying even at high processing speeds, integrated rotary units and special folding compression clamps achieve stable and clean carton packaging. The KHS Kisters

WrapAroundShrinkPacker, a combination of WrapAroundPacker and ShrinkPacker, is capable of packing trays and cartons and then wrapping them in shrink film. One of the strong points of the WrapAroundShrinkPacker is its ability to process a wide variety of different formats.

Your advantages:

- Continuous motion principle
- Flexible changeover
- Minimum operator attendance
- Suitable for packing in wrap-around cartons and trays
- High pack stability is achieved by folding the cardboard blanks tightly around the product
- Cartons can incorporate carrier handle, display cut-outs and easy-open perforations
- Processing speed adapted automatically to that of speed matching to the product line
- An electronic and error display system reduces machine downtime
- Interfacing to higher level monitoring systems
- Constant self-monitoring
- Quick changeover facilities incorporating a format selector switch
- Capabilities for combining with a KHS Kister ShrinkPacker to become fully integrated KHS Kisters WrapAroundShrinkPacker
- Typical applications: beverage and food cans, glass and plastic bottles (also with petaloid bases), pre-packed multipacks

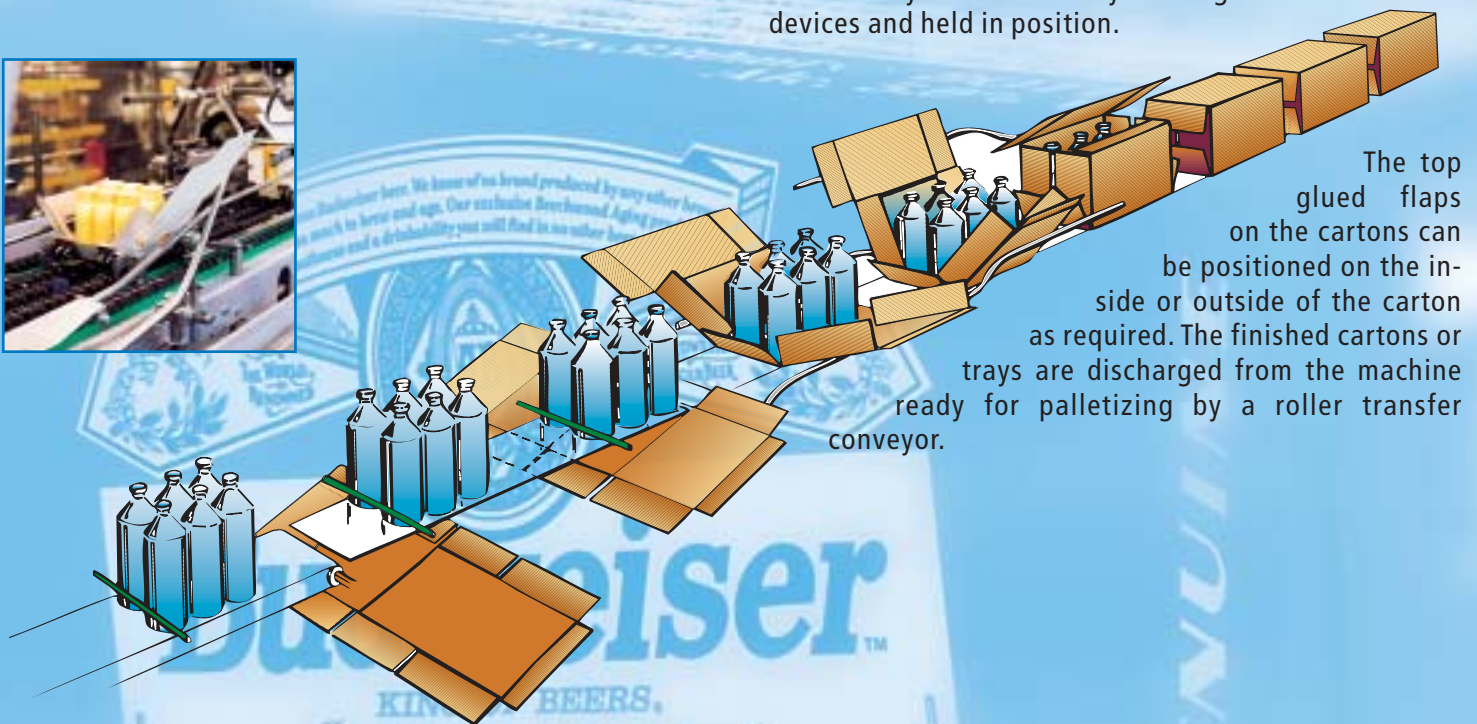

WrapAroundShrinkPacker: Combination of WrapAroundPacker and ShrinkPacker

The KHS Kisters WrapAround Packaging Process is an economical alternative to the using pre-folded cartons. The wrap around blanks cost less and can incorporate display cut-outs, carrier holes, integrated carrier handles, perforations for easy opening and excellent possibilities for promotional printing.

Working principles:

Tray or carton blanks are fed from a large capacity and easily accessible magazine located below the product infeed conveyor. The tray or carton blanks are conveyed to the integrated folding section where the product group is synchronized and loaded onto the tray or carton. The tray or carton blanks are folded tightly around the product group and the adhesive is applied. The trays or cartons then pass to the sealing section where they are closed by folding devices and held in position.

The top glued flaps on the cartons can be positioned on the inside or outside of the carton as required. The finished cartons or trays are discharged from the machine ready for palletizing by a roller transfer conveyor.
